

Electromagnetic field theory (2nd Edition Series 21 Undergraduate teaching)

By YU JI HUI

paperback. Book Condition: New. Ship out in 2 business day, And Fast shipping, Free Tracking number will be provided after the shipment. Pages Number: 255 Publisher: Chongqing University Pub. Date :2009-03-01 version 2. Book is by the Chongqing University School of Electrical Engineering Theory and New Technology program group in the electromagnetic theory and practice of teaching and research for many years on the basis of written is made. The main contents include vector analysis. electrostatic field. a constant electric field. constant magnetic field. plane electromagnetic wave propagation. guided waves. antennas and other electromagnetic radiation and energy content. compared to version 1. refining the static field. a time-varying fields to enrich and strengthen the electromagnetic waves. Book with clear examples and problem-solving ideas rich type exercises. This book can be 64 teaching arrangements will apply to the professional class of electrical information. reference materials may be used as an elective. or for the relevant readers to use. Contents: Chapter 1 vector algebra and vector analysis of the position vector 1.1 1.2 1.3 scalar field and its gradient vector field of the flux and divergence of 1.4 vector field and the rotation of the circulation field function of the high-end 1.5 1.6...

Reviews

This book is definitely worth acquiring. I have go through and so i am certain that i will likely to read through again again in the future. Its been printed in an exceptionally basic way in fact it is only after i finished reading this publication in which actually altered me, change the way in my opinion.

-- **Andres Bashirian**

Comprehensive guide for publication fanatics. This really is for all who statte there had not been a well worth reading through. I discovered this ebook from my dad and i encouraged this book to find out.
