

Modeling and Control of Vehicular and Robotic Systems

By Sisil Kumarawadu

Alpha Science International Ltd. Hardback. Book Condition: new. BRAND NEW, Modeling and Control of Vehicular and Robotic Systems, Sisil Kumarawadu, "Modeling and Control of Vehicular and Robotic Systems" provides a comprehensive coverage of mathematical modeling and model-based control of autonomous vehicular and robotic systems based on three broad application areas, namely, rigid robot systems (with special emphasis on active vision heads, which are rare in contemporary literature), ground vehicles, and surface vehicles. Two main drawbacks of classical methods of model based controller synthesis and implementation, i.e. the need of an accurate knowledge of the dynamics that is a strong requirement in practice and velocity feedback of all degreesof-freedom are thoroughly addressed. To overcome these deficiencies, design and implementation issues of online adaptive neural networks-based dynamic compensators and controller-observer systems have been included. The related issues of modeling, controller design, stability analysis, sensor requirements and options, and numerical simulations are also presented.
